Education

University of California, Los Angeles — **Anticipated Jun 2023**
B.S. Computer Science, GPA: 3.602

Skills

Languages: Python, C/C++, Bash, HTML, CSS, JavaScript, SQL, C#
Technologies: Linux, Git, Flask, Django, React.js, MySQL, Arduino, Unity

Experience

The Aerospace Corporation – *Technical Intern* — **Jun 2021—Sep 2021**

- Introduced a Flask RESTful API backend service and web app interface for astronomical time system translations using Earth Orientation Parameters data from MySQL database
- Designed and implemented a department portfolio website using React to centralize news, projects, capabilities, and contact information for current and prospective customers
- Added capabilities to an on-campus video wall application using Unity and C# scripts to modify user viewport, display PDFs and HTML webpages, and an interactive calendar

iD Tech Camps – *Online Instructor* — **Jul 2020—Apr 2021**

- Taught K-12 students C++, Scratch, Arduino, and Minecraft in online private lessons
- Developed programming and technology curriculum for individual students and skill levels

Campus Involvement

Bruinwalk – *Software Engineering Intern* — **Oct 2021—Present**

- Develop full stack app for sharing UCLA professor and class reviews used by 50k students
- Update user interface with HTML, CSS, and Django for website redesign initiative

Institute of Electrical and Electronics Engineers – *Project Member* — **Sep 2019—May 2021**

- Strengthened practical programming skills in embedded systems and electrical
- engineering projects through Micromouse and OPS (Open Project Space)
- Soldered and programmed an autonomous maze-solving robot and developed data structures in C to record maze environment and robot positioning and calculate Manhattan distances in order to execute flood fill algorithm using a circular queue
- Coded a “Red Light, Green Light” game between 2 Arduinos with UART protocol
- Transcribed full-length piano pieces/pop songs into code for an 8-bit Arduino music player

Projects

Tu.Can – *Full Stack Messaging Web Application* — **Jan 2021—Mar 2021**

- Programmed an instant message application using MERN stack with user authentication
- Built frontend components for login page, registration page, and various color themes
- Implemented API routes to update MongoDB database in real time with Pusher middleware

TI-RSLK – *Autonomous Line-Following Car* — **May 2020**

- Programmed PID feedback loop in C++ for TI-RSLK robot to follow 2 arbitrary paths
- Calibrated autonomous steering in Excel using sensor fusion and normalizing 8 IR sensors
- Scored fastest overall completion time across both paths in a 20-person lab section

Mori – *Arduino Memory Game* — **May 2020**

- Built a memory game in Arduino/C++ by flashing strings of numbers in the console
- Programmed logic to track game state, player reaction times, and overall score
- Plotted in Python to visualize relationships between game settings and player performance
